Anang Kurniawan

Mobile Engineer · Android (Kotlin/Compose) & iOS (Swift)

anangk97@gmail.com · +62 851-5538-8113 · linkedin.com/in/anangkur · github.com/anangkur · Depok, Indonesia (UTC+7) · Remote-friendly

SUMMARY

Mobile engineer with 6+ years building production Android apps in Kotlin and Jetpack Compose, plus hands-on iOS experience in Swift, with Clean Architecture and Orbit MVI/MVVM across the mobile stack. Comfortable communicating in English across distributed teams; based in Depok, Indonesia.

EXPERIENCE

Mobile Engineer Staffinc Group — May 2020 — Present

- Develop and maintain **Staffinc Jobs** (Android — job portal for blue-collar workers) and **Staffinc Work** (Android & iOS — staffing platform: attendance, submission, payroll) used by **~30,000 active users**, built on multi-module **Clean Architecture** (data/domain/presentation) with Orbit MVI on Android and MVVM on iOS.
- Work across the full delivery lifecycle — **sprint features, production bug fixes, ad-hoc client requests, self-driven initiatives** — from requirements and design docs through implementation, testing, and release, within a ~20-person engineering team, contributing to knowledge-sharing sessions.
- Use a **self-hosted AI agent** to automate delivery workflows — design documentation, task breakdowns, implementation, and fixes — alongside AGENTS.md standards across the mobile repos.

Android Developer GITS Indonesia — 2018 — May 2020

- Built Android applications for client projects across industries as part of a software consultancy.

INDEPENDENT PROJECTS

GraTools — free business & finance calculator platform · gratools.com

Designed, built and shipped a free business & finance tools platform — 6 calculators (freelance rate, compound interest, loan, savings goal, break-even, depreciation) — custom design system, vanilla JS with 100% test coverage, SEO, GitHub Actions CI, deployed on Docker/nginx behind a Cloudflare tunnel.

Android apps & open source — material-loading-button · budget-ku · walla · medi-ku

Built and published multiple Android apps (personal-finance, wellness and health-tracking) plus an open-source Jetpack UI component — from architecture and design to Play Store release.

AI-driven personal automation — self-hosted agent workflows · homelab

Operates a self-hosted AI-agent system across seven workspaces — work, personal, side projects, investing — with automated daily market briefings, screeners, and household workflows (1,400+ sessions), on a Linux server running 10+ Docker containers (Nextcloud, Immich, Home Assistant, Gitea, Linkwarden, Vikunja).

SKILLS

Android & Kotlin	Kotlin, Java, Jetpack Compose, Android SDK (API 21–36), Gradle (Kotlin DSL), XML layouts, Material Design, Clean Architecture (data/domain/presentation), Orbit MVI, Coroutines & Flow, Koin, Retrofit, Room, WorkManager, Firebase, testing with JUnit, Espresso, Compose UI & Shot/Paparazzi snapshot tests, modern-SDK migration & Play Store compliance
iOS & Swift	Swift, iOS development & app maintenance, Clean Architecture + MVVM, UIKit + RxSwift, SwiftUI + Combine (SPM feature modules)
Infrastructure	Docker management (Compose, 8+ self-hosted services: Nextcloud, Immich, Home Assistant, Gitea, Linkwarden, Vikunja)
AI & Automation	Self-hosted AI agents (1,400+ sessions across dedicated workspaces), prompt-to-task pipelines, cron & market-screener automation, Python scripts, agent-driven documentation (AGENTS.md)
Languages	Indonesian (native) · English (professional working proficiency — written & spoken)

EDUCATION & CERTIFICATIONS

S1 — Informatics Engineering, Telkom University, Bandung · GPA 3.18/4.00

Google Associate Android Developer — certified; credential expired.
